# Coronavirus COVID-19

## Can Patients Become Reinfected?

- Reports of re-infection:
  - Likely false negative test at hospital discharge.
- Other coronaviruses may reinfect after many months or years.
- Study among primates showed the animals did not become infected after re-exposure to SARS-CoV-2.
- Reinfection is highly unlikely.

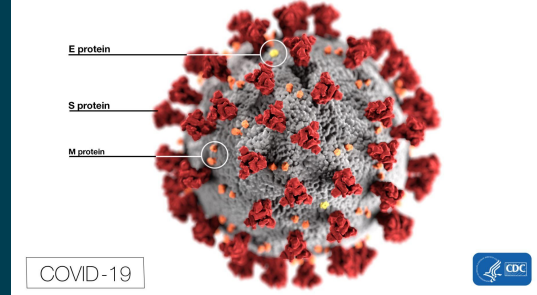

# Coronavirus COVID-19

## Should Everyone Wear a Mask in Public?

Currently, CDC does not recommend routine use of medical masks among healthy individuals. (Based on study of flu prevention).

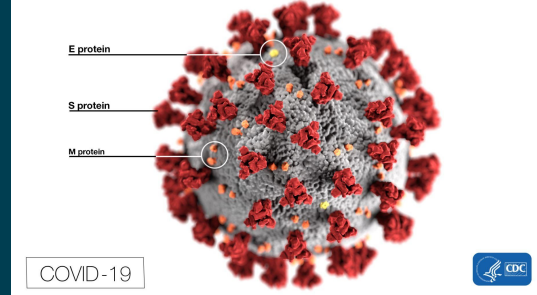

- A review study showed a mask, WITH handwashing, prevented SARS-CoV-1 infection.
- Because SARS-CoV-2 can be transmitted without symptoms, there is value in the use of masks.

# Coronavirus COVID-19

## How Does SARS-CoV-2 Spread?

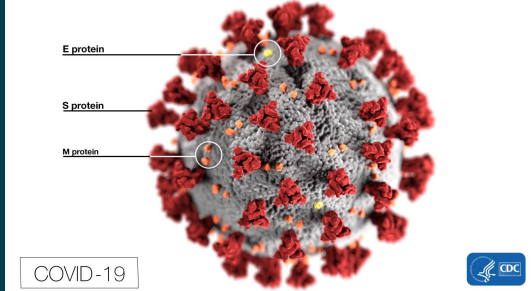

- SARS-CoV-2 transmitted through droplets.
- Person-to-person transmission: coughing, sneezing, and talking.
- Droplets on objects last up to 9 days.
- Aerosolized particles can transfer during medical procedures.

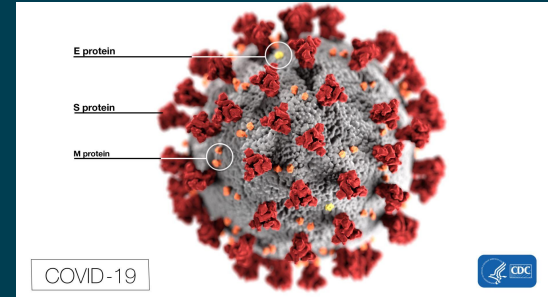

# Coronavirus COVID-19

## When Will a Vaccine Be Available?

- A vaccine against SARS-CoV-2 is the ultimate strategy for controlling this pandemic.
- 3 vaccine candidates are currently in phase 1 human trials.
  - Estimated availability vaccine is early to mid-2021.

# How to talk to kids about COVID-19

# 1. Care for yourself!

2. Do NOT pretend it does not exist/avoid talking about it

3. DO use developmentally appropriate language.

- let your child ask questions

- don't volunteer too much information

4. “Let Bobby be Bobby.”

- take cues from your child (not your own feelings)

- validate feelings and reassure children

# Helpful for All Ages :)

1. Structure and Empowerment
2. Get outside!
3. Talk about other things.
4. Use resources:
